Alignment Wedge (Beton Shimi)

What is a parallel wedge?

A leveling wedge is a handy tiling tool used to adjust the spacing between large tiles. These wedges are usually made of plastic or metal and come in various sizes.

Technical specifications of the parallel wedge	
Product type:	Plastic
Color :	white
Height :	Depending on the type of infrastructure
Size:	Small, large, standard

How to use the leveling wedge:

To use the small leveling wedge, follow these steps:

Determine the location of the tiles.

Apply the tile adhesive on the desired wall or surface.

Place the tile in its place.

Place the small leveling wedge in the gap between the tile and the wall.

Secure the tile in place.

Buy small parallel wedges from our store

Advantages of using the standard parallel wedge:

Using the parallel wedge has many advantages, including the following:

Adjust the distance between the tiles: Alignment wedges make the tiles sit next to each other in an orderly and uniform manner. This makes tiling more beautiful.

Increased tile installation speed: Parallel wedges increase the tile installation speed. This is because there is no need to adjust the distance between tiles using different tools.

Ease of tile installation: Alignment wedges make tile installation easier. This is due to the simple and practical design of these wedges.
