## concrete glue(Beton SHimi)

### concrete adhesive BS500:

Concrete glue is one of the chemical substances that is widely used in the construction industry today. This glue increases the tensile strength, bending and durability of concrete, but its most important property is the increase of adhesion. Concrete adhesive is a concrete additive that is used to increase the adhesion of new concrete to old concrete or other surfaces. This material is produced from polymer compounds and special additives.

#### Technical specifications of concrete glue

physical state :	doughy
Color :	white
packing :	1-4-10 liters
product type :	Polymer cement base
Mixing ability:	has it
Chlorine ion:	does not have
Expiration date :	One year after production
Storage temperature:	5-35 degrees Celsius
Maintenance :	in closed and airtight containers

### What are the advantages of BS500 concrete glue?

Increasing the adhesion of concrete  
Resistance to water and humidity  
High flexibility  
long life

### How to use concrete glue:

To use concrete glue, the desired surface must first be cleaned of any contamination and excess materials. Then, apply the glue on the desired surface using a brush, roller or special device.

If using a brush or roller, at least two layers of glue should be applied with an interval of 12 hours. If you use a special device, you must follow the instructions of the device.
