## Concrete restorer(Beton SHimi)

### Concrete restorer BS170:

Concrete restorer BS170 is a cement-based powder that contains various resins and is easily mixed with water to obtain a homogeneous paste with easy application, which has a very high adhesive strength to all types of concrete surfaces and mineral materials.

And its drying shrinkage is very small and it does not shrink in any way and it can be applied on horizontal and vertical surfaces and it is used to repair surface damage in concrete structures and it does not crack in any way due to its tensile strength.

#### Technical specifications of concrete restorer

physical state :	powdery
Color :	Gray
packing :	20 kg bags
Mixability:	has it
Chlorine ion:	does not have
Maintenance :	Protected from water and humidity for one year in the original packaging
weight :	1300 kg/m <sup>3</sup>

### Method of using BS170 concrete restorer:

Before use, the work surface must be completely clean and free of dust, grease, and oily substances, and for better adhesion, the work surface must be slightly moist. And you can also use the foundation primer for further preparation.

Usually, pour 30% of the weight of the powder, water into the container and add the repair agent little by little and mix until a uniform paste is obtained, and after ten minutes it is necessary to stir again.

### The consumption of BS170 concrete restorer:

About 3 kg is enough to cover one square meter with a thickness of 2 mm.
