## Heblex Fastener(Beton SHimi)

### Hablex connector:

Heplex connector is a type of mechanical connection that is used to connect Heplex blocks to each other. These fasteners consist of two main parts, the fastener body and the screw.

Technical specifications of Hablex connector	
Type:	Heblex Fastener
Width:	30 cm
Thickness:	2 mm
Application :	Replacement of vestibule connection in AAC walls
product type:	Galvanized steel sheet

### Steps to use Heblex connector:

.1Choosing the right fastener:

The first step is to choose the right fastener according to the type of Heplex block and the desired application.

.2Preparation of blocks:

Before installing the fasteners, you need to completely align the Hablex blocks and put them in place. You can use a ruler and a level for this.

.3Fastener installation:

You need a suitable drill to install the Heplex L bracket. First, make a hole with a suitable diameter in the Hablex block at the desired location. Then put the fastener in the hole and tighten it using a drill.

.4Connecting blocks:

After installing the fastener in one block, attach the other block to it. To stick the blocks, you can use a special mortar for Hablex. Spread the mortar thoroughly between the blocks and make sure they are smooth and level.

.5Repeat steps:

Repeat steps 3 and 4 for all blocks in the row.

### The application of Heplex connector:

- Use in Hablex walls
- Use in Heblex roofs
- Use in Hablex columns
