Paste tile glue (Beton SHimi)

Paste tile glue:

Use paste tile glue in decorative cases where you are sure that water and moisture will not reach it, otherwise, powder tile glue is recommended, which is both more economical and has higher resistance.

Specification of paste tile adhesive

physical state :	doughy
Color :	white
packing :	12 kg bucket
Mixability:	has it
Chlorine ion:	does not have
Maintenance :	away from cold and heat in a closed bucket
Ph:	7

Features of paste tile adhesive BS550 :

- High adhesion
- Suitable for walls and floors
- Ready to run

Amount of paste tile adhesive:

About 3 to 5 kg of paste tile adhesive is needed for each square meter of ceramic tile

The method of preparing paste tile adhesive:

Chemical concrete paste tile adhesive is completely prepared, open the lid of the bucket, open the plastic inside, and now it is ready to use.

The best paste tile adhesive:

Gold chemical concrete paste tile adhesive has more resistance to water than other products in the market.

How to use paste tile adhesive (use method of paste tile adhesive):

Apply and install the ready-made paste tile adhesive on the surface or back of the ceramic tile with a trowel. (For wet places, be sure to use powder tile glue.).
