

Beton SHimi
بتن شیمی زرین کوه

Resistant concrete (Beton Shimi)

Concrete strengthener BS140:

Concrete hardener is used to repair damaged concrete surfaces and holes above 5 mm, to implement muscles in tanks and channels, to repair concrete tanks, concrete and cement parts.

Specification of BS140 concrete reinforcement

physical state :	powdery
packing :	20 kg bags
Mixability:	has it
Chlorine ion:	does not have
net weight :	1300 kg/m ³

The advantages of using concrete reinforcement are:

- Increasing the strength and durability of concrete
- Reducing the permeability of concrete
- Prevent concrete from cracking
- Increasing the resistance of concrete against chemicals
- Increased resistance of concrete against freezing and melting
- Increasing the bearing capacity of the structure
- Repair of concrete cracks and damage
- Protection of concrete against corrosion and environmental factors
- Increasing adhesion between concrete and rebar
- Applicable in different weather conditions

How to use the stabilizer:

Add a 20 kg bag of stabilizer to 6 liters of water little by little and mix.

To increase the quality, use 500BS concrete glue.
