Chemical roof insulation (Beton Shimi)

Chemical roof insulation BS990:

Shimi Bam is a one-component product and with its special properties, it has replaced traditional insulators such as isogum and asphalt. After it is applied on any type of material, especially concrete and metal, a completely resistant layer with high elasticity is created, and against UV rays and It is completely resistant to atmospheric factors.

Roof insulation technical specifications	
physical state :	doughy
Color :	White and available in different colors
packing :	1 kg bucket
Mixing ability:	in the water
Chlorine ion:	does not have
Expiration date :	One year after production
Maintenance :	away from cold and heat in a closed bucket

Advantages of using chemical roof BS990:

It has a strong adhesion to all kinds of materials
Easy implementation and excellent adhesion to metal materials and surfaces, mosaic asphalt, brick, stone, concrete, isogam, roof, plastic, etc.
Resistant to sunlight and UV rays
Resistance to frost and heat
Light and durable against building vibrations
It can be washed and restored

Applications of BS990 roof chemistry:

Roof and wall insulation
Roof garden insulation
Repair of Isogam and Qirguni
Insulation of bathrooms, kitchens
High adhesive strength

Amount of chemical roof BS990:

About 1.3 kg is required for the thickness of 1 mm.
