Tile cross (Beton Shimi)

Tile cross:

Ceramic tile cross is a piece whose use creates a uniform and regular distance between ceramic and tile. This piece is one of the latest tools related to installing ceramic tiles and is very practical, simple and at the same time affordable.

Technical specifications of the tile cross

Color :	white
packing :	a package
product type:	plastic
Size:	2,3,4,5,6,7,8,9,10 mm
Application :	Leveling the surface of the tiles with each other and the floor

How to use the tile cross:

First, use a spatula to cover the entire surface where the ceramic tile will be placed with tile adhesive. Then align the tiles on one side and start stacking them. Place the tile spacer exactly on the surface where the tiles meet, after finishing tiling and partially sticking the tile to the surface, use a sharp tool to remove the crosses from between the joints, and then use grout or jointing mortars to finish

If the tiles or ceramics are large in size, it is recommended to use one or two cross tiles in the space between the two tiles.

Advantages of using tile cross:

- Economic, cheap and cost-effectiveness of crosses
- Setting the distance uniformly in tiling
- Increasing installation speed in tiling
- High accuracy in tile installation
- Maintain the distance between the tiles
- It prevents the breaking of ceramic tiles
- Delivering flawless work
- Fixed tiles during installation
- Light weight and easy to move crosses
